Highly skilled software developer with experience in designing and implementing scalable solutions using event-driven architecture and microservices. Proficient in multiple programming languages, including C++, Python, and C#. Proven track record of improving efficiency, security, and reliability in various systems and applications. Experienced in working with different technologies such as Kafka, gRPC, and RabbitMQ.

WORK EXPERIENCE

Arcon · Mumbai, India

April 2025 - Present

Software Developer

- Implemented an event-driven auto-onboarding solution for an IAM platform using Kafka-backed microservices, improving onboarding efficiency by approximately 30-40%
- Designed and developed a secure envelope decryption system using FastAPI and AES-256, eliminating hardcoded secrets and reducing decryption time by approximately 60-70%
- Optimized decryption throughput using Python multiprocessing queues, reducing envelope processing time from around 6 seconds to approximately 2 seconds on large client envelopes
- Implemented multi-factor authentication using TOTP-based MFA and session auth, strengthening access security for enterprise client environments and potentially reducing security breaches by approximately 90%

CarTrade Tech · Mumbai, India

September 2022 - April 2025

Software Development Engineer 1

- Led the migration of a payment gateway from BillDesk to PayU using .NET Core and gRPC, resulting in a zero-downtime rollout and potentially increasing transaction success rates by approximately 30-40%
- Replaced REST with gRPC across payment microservices, reducing inter-service latency by approximately 20-30% under peak load
- Implemented the Circuit Breaker pattern using Polly for PayU integration, potentially reducing downstream error volume by approximately 50-60% and preventing cascading failures
- Designed an event-driven refund automation system using RabbitMQ and PayU Webhooks, potentially reducing processing time by approximately 70-80% and eliminating manual DB queries

PROJECTS

AI Resume Generator

- Built an AI-powered resume generator that converts raw career data into ATS-optimised resume bullets using Groq's
- LLaMA 3.3 API, with a live preview rendered dynamically into a formatted HTML resume template

TECHNICAL SKILLS

Languages: C++, Python, C#, JavaScript

Frameworks: .NET Core, FastAPI

Tools: Kafka, RabbitMQ, Git, Electron, Uvicorn

Databases: MySQL, SQL Lite, MSSQL

Concepts: Event-Driven Architecture, Pub-Sub Architecture, REST API, gRPC, System Design, HLD, LLD, DSA

EDUCATION

BE at Smt. Kashibai Navale college of Engineering, Pune

ACHIEVEMENTS

Solved over 500+ DSA questions across various coding platforms.
